

BACKEND ENGINEER

■ ruslan.kondratyuk.dev@gmail.com | 🏠 https://wittyjudge.github.io/ | 🖸 wittyjudge

About Me_

I worked extensively with PHP, specifically the Laravel framework.

As I delved deeper into web development, I eventually made the switch to Ruby and Ruby on Rails. Within this tech stack, I've utilized a variety of powerful gems, including Sidekiq, Devise, and Pundit. To ensure high-quality code, I used linter Rubocop with extensions Rubocop-Performance and Rubocop-Rails.

I have experience with PosgreSQL as well as MySQL and Redis for caching. When I was working in analytical company, I specialized in the columnoriented database ClickHouse. I also possess strong SQL skills, able to structure and normalize relational databases with ease.

As a Linux user, I'm skilled in bash programming language and have developed a variety of scripts, which you can check out in my dotfiles Github repository.

Have experience in Lua with my neovim config and that was a fun learning experience.

With my varied technical background, I'm confident that I would be a great fit for the position of Backend Engineer. For more information on my experience and preferences, please check out my Github account.

Skills_

Languages Golang, Ruby / RoR, SQL, bash

Tools Linux, Ansible, Docker, Git, Hugo, Neovim

Experience

Backend Developer Cyprus, Paphos

BITQUERY February 2021 - present
